January 2022 - March 2022 | 3  
Months Experience

#### FULL STACK WEB DEVELOPER

Hajex Bolt | October 2022  
To onward 2023

# About My Projects

- Here are some details about the projects that I have done in my Projects.

## Zrs Gaming

- FULL GAMING WEBSITE ZRS GAMING | September 2021 - October 2021

- User Authentication
- Users can request to admin to upload videos on the owner channel.
- Users can request to admin for live streaming on the owner channel.
- It further depends on the owner to accept the request or reject it.
- If the admin uploads the user videos after he can update the status of the requested videos from the admin panel dynamically.
- Different kinds of links are uploaded by the admin from the admin panel and then they will show to the user panel automatically.
- Users can apply for different kinds of challenges.
- Users can apply for Squad Matches for upcoming challenges.
- And users can also earn money from the requested videos.
- Admin can handle all users' accounts.
- Admin can restrict the user account if some of the users want to fool the admin in different ways.
- Admin can control everything about the user
-

# Human Resource Management (HRM) / With Api's

- Fully Human Resource Website | September 2021 - October 2021
- This project is based on office employees.
- Admin can create accounts for employees.
- In this project, employees can update their profiles.
- Employees can mark their attendance.
- Employees can apply for leave if they want.
- Employees can see today's Menu.
- Employees can see any kind of notifications.
- Employees can see any kind of event from the admin/owner.
- Admin can accept/reject the Employees leave.
- Admin can handle the Employee's accounts.
- Admin can add today's Menu.
- Admin can create notifications for Employees.
- Admin can check the Employees Attendance.
- Admin can Delete or update Employees accounts.
- Admin can restrict the Employees from authentication
-

# GasZik / With Api's

- GasZik | November 2021 - December 2021
- This Project is Based on Gas Company.
- In Which user can search for gas cylinder provided by the company,
- After that user can get a nearby Driver who can help the user to deliver their selected gas cylinder.
- There are different kinds of Status levels updated by the driver like Dispatched, On the way, Delivered, etc.
- If the user can't get the nearby driver then the user can select any driver and confirm the order.
- When the selected driver is free then he gets automatically a notification to deliver an order.
- The Driver account is only created by admin by required requirements
- And users can create its account on their own.

# Community Health

- Community Health | November 2021 - December 2021
- This Project is based on the Doctor and Patient.
- In this project, there are two different panels for patients and doctors.
- Patients can create their accounts and after that select the doctor by whom patient want their treatment. And Patients tell the doctor about their diseases and submit their application to the doctor.
- Then the doctor gets the notification By Email this user applies for an appointment go and check it out.
- Then it's on the doctor to accept or reject the appointment.
- If Doctor accepts the appointment then the user gets an email notification that Doctor has approved your Appointment wait for the meeting link.
- Then the Doctor sends the Zoom Meeting link or other meeting links then both the Patient and Doctor discuss the disease.

## Muabbir / With Api's

- Muabbir | November 2021 - December 2021
- This project is Based on Quotes.
- In this Project, the user can create an account and upload quotes or read uploaded quotes on their own.
- Users can read all the available quotes uploaded by other users.
- Users can react to the quotes by the like and dislike button.
- There is automation in this project once a user sees the quote then the views are automatically saved in the database.
- Users can see the trending quotes as well.
- Users can also see high-rated quotes similar quotes, etc.

## Noqta / With Api's

- Noqta | November 2021 - December 2021
- This is Multi-Vendor Project.
- This is based on Virtual Martes that don't exist but they can sell their products based on markets and shops.
- Users can order any product and the admin can get a notification that you have new order and then the admin confirms the order and assigned this order to its delivery boy.
- Then the status of the order is updated by the delivery boy on the way to the delivered order.

# Appointmnet with Doctor/ With Api's

- Appointmnet with Doctor | January 2022 - February 2022
- This project is based on an Appointment with Doctor.
- In this Project, the user can create an account and there is a list of all doctors who joined our website as a doctor then user chooses the selective doctor the user wants then the user can book an appointment with that Doctor.
- The booked appointment is also shown in the history for every user separately.
- The specific doctor gets the Notification of appointment from the user then the doctor updates the status of the appointment if the doctor wants to do a meeting with the user he will update the status of the appointment and create a meeting link for the user and share it with the user within the website.

## Book Ambulance

- Book Ambulance | January 2022 - February 2022
- This project is based on a book ambulance.
- In this Project, the user can create an account and there is a list of all Ambulances who joined our website as Drivers then user chooses the selective Drivers the user wants then the user can book an ambulance with that Drivers.
- The booked ambulances showed in the history for every user separately.
- The specific Driver gets the Notification of booking from the user then the Driver updates the status of the booking if the Driver.
